## ● My Journey ●

*Hello !*

I am Nikita Ujjainia, Final year student of Knitwear design department from National institute of fashion technology. I still remember my first hand make garment from a single jersey knitted fabric. I couldn't image how come a single fabric can be transformed into something so beautiful. Throughout my fashion college journey, I latched on to any and every project I could get. As a part of my knitwear designer journey, I explored the formation of fabric from yarns and made garment out of it. My fond of Sci-fiction movies and novels made me transform my observation skills to a Fantasy Haute couture collection. Showcasing what I have learnt, absorbed and explored in my journey as a Designer.

2012

Unconscious State

Gravity

Zero gravity

Passanger

The movie 2012 (End of this world) is about the unawareness of the inhabitants, that the Earth has an expiration date. It shows occurrences of calamities like earth quake and cyclones and volcanic eruptions which will lead to the end of the Earth.

In the movie **Gravity**, they've shown how with zero gravity affect humans and objects and how they cope up.

In movie **Passenger** they showed the effect of zero gravity on the water and how will it act in such situation. What will happen if Earth loses its gravitation forces?

# 3 Earth Without Gravity

- Effect on Water

Gravity holds every particle together. What if one day, EARTH LOST ITS GRAVITY! At its pleasant visualisation, things would start floating without restrictions. But soon they will shoot off upwards in a straight line. Organisms would lose consciousness. Firmly rooted elements like trees and mountains would eventually get uprooted. Atmosphere would disintegrate to expose the surface to vacuum. A spectacular transformation would be in the water, and depicting that is the motivation for this theme. Water remains calm and stable with its usual waves under the gravity. As soon as gravity is lost, a ripple effect will appear on the water surface. The tides would intensify and there would be larger waves. Slowly the water would start rising in the form of water globules and bubbles. Bubbles floating all around in the air. Thus all water would evaporate into the sky. Rivers and seas would dry off taking away marine life with it. On the whole the effect would be catastrophic but there would be beauty in it, worth beholding.

1 Formation of small waves

2 Small bubble formation

3 Tides formation

6 Vacuum will create in air and traps everything

4 Water floating in air

5 Every creature will be floating along with water
